FOREWORD

The Central Basin has been operating under a well-defined ground water basin management plan for several years. One phase of the management plan limits ground water extractions from the basin. This phase is monitored by a Court-appointed Watermaster (California Department of Water Resources) that reports significant ground water activity to the Court and other interested parties.

The Watermaster has prepared this annual report for the parties to the Central Basin Judgment and the Superior Court of Los Angeles County to present a comprehensive review of the water conditions of the Central Basin during the 1967-68 water year. Authorization for this report is contained in the provisions on page 43 of the Judgment rendered by the Superior Court of Los Angeles County in the action: "Central and West Basin Water Replenishment District vs. Charles E. Adams, et al., No. 786,656".

This report contains information on ground water extractions, use of imported water, recharge operations, the administration of the Exchange Pool, and a financial report on Watermaster Service during the 1967-68 water year.

ABSTRACT

A reliable supply of good quality fresh water is a valuable asset to any community. / The Central Basin is a relatively small, but extremely important, ground water basin underlying the southeastern part of the Los Angeles Coastal Plain. Watermaster Service, provided by the California Department of Water Resources, helps to protect and guarantee continued use of ground water by the residents of the area. / The Watermaster has prepared this Central Basin annual report for the Superior Court and the parties to the Judgment. This report contains information on ground water extractions, use of imported water, recharge operation, sea-water barrier operations, and the administration of the Judgment. It also serves as a financial report on the cost of Watermaster Service during the 1967-68 water year.

CHAPTER I. THE CENTRAL BASIN

There is little doubt that a reliable supply of good quality fresh water is a valuable commodity. In arid Southern California, such a supply is priceless. Witness the vast amounts of time, effort, and money spent each year to protect the ground water supply of the Central Basin.

The Central Basin is a relatively small ground water basin underlying the southeastern part of the Los Angeles Coastal Plain. The sketch on the facing page shows us that the basin is bounded on the south and west by the Newport-Inglewood Uplift, on the north by the hills between the Coastal Plain and the San Gabriel Valley, and on the east by the Orange County line.

Most of the 227 square mile basin supports an urban-suburban culture. There are 23 incorporated cities claiming a share of the basin's surface area (in this report, the term Central Basin is used for both the ground water basin and the overlying area). Fortunately, a substantial portion of the water needed by the cities can be pumped directly from the basin below.

Obviously, ground water is important to the people who live and work in the Central Basin. Some twenty years ago, after declining water levels triggered sea water intrusion which threatened the ground water supply, swift legal action halted the overdraft and prevented serious damage to the basin. Today, ground water use in the Central Basin is monitored by a Court-appointed Watermaster. The Watermaster's prime job is to control ground water use and report significant water related events that occur in the Central Basin to the Court and parties.

Scope of Report

This is the Watermaster's annual report to the Superior Court of Los Angeles County--and to you as a water user or interested observer of water conditions in the Central Basin. The purpose of this report is to describe water supply conditions in the Central Basin during the 1967-68 water year (October 1, 1967 through September 30, 1968).

Detailed comments have been prepared on the following topics: the history of water resources development, ground water replenishment, use of imported and exported water, ground water extractions, sea water intrusion barrier, and fluctuations of the ground water table.

Extensive coverage--in each case a complete chapter--has been devoted to the Watermaster's administration of the Judgment and the cost of Watermaster Service during the 1967-68 water year.

History of Water Resources Development

One hundred years ago, the Los Angeles Coastal Plain was poised on the threshold of a development boom. The key to the future of the Central Basin was water.

The definite shortage of adequate year-round surface supplies in the Central Basin forced the early development of ground water sources. As early as 1870, water users had tapped the artesian wells and springs east of the Newport-Inglewood Uplift. When the artesian wells ceased to flow, water users were forced to drill small wells for reliable water supplies. These small wells easily produced enough water by pumping to continue the economic growth of the Central Basin Area.

Ground water development spurted dramatically ahead in 1909 with the advent of the deep well turbine pump. Tremendous adaptability and superior operating characteristics of the new pump placed efficient water wells within economic reach of everyone. Reliable water supplies attracted industry and agriculture. Each new business required water. Eventually, the demand for ground water exceeded the natural replenishment of the Central Basin.

The resulting overdraft was clearly indicated by dropping ground water levels and a few small areas of sea-water intrusion. The rapidly increasing cost of pumping ground water and an occasional well failure because of dropping water levels were the chief economic reasons for the keen interest in the Central Basin's serious ground water problem.

The deteriorating ground water situation in the Central Basin and the adjoining West Coast Basin prompted interested water users to form the Central Basin Water Association in 1950. A plan to manage the Central Basin's resources began to materialize. The plan would:

1. Provide a supplemental water supply to major producers.
2. Limit ground water extractions from the Central Basin.
3. Create an exchange water pool to provide pumping rights for water users without access to supplemental water.

Phase 1 was realized in 1952 when the Central Basin Municipal Water District was formed to distribute water from the Colorado River. The District was annexed to the Metropolitan Water District of Southern California in 1954 and Colorado River water soon arrived in the Central Basin.

The West Basin Water Association and the Central Basin Water Association were largely responsible for the creation of the Central and West Basin Water Replenishment District in 1959. This special District covers

420 square miles of the Central and West Coast Basins (Coastal Plain) of Los Angeles County. The District's objective is to replenish and maintain the now depleted ground water basins by purchasing imported water to halt sea-water intrusion and replenish the ground water supply. The District financed this program during the 1967-68 year by placing a \$6.11 tax on each acre-foot of ground water extracted within the District's boundaries.

On January 2, 1962, the Central and West Basin Water Replenishment District filed Case No. 786,656 in the Superior Court, County of Los Angeles, naming more than seven hundred parties. The Plaintiff's objectives: quiet title to rights to the use of ground water, and regulate withdrawals from the Central Basin to protect the water supply from deterioration.

Adverse ground water conditions, and the indefinite period before a final adjudication could be expected, prompted the Central Basin Water Association to draft an interim agreement curtailing extractions from the basin. By September 1962, a proposed interim agreement had been approved by a sufficient number of water producers (producers owning over 75 percent of the Assumed Relative Rights within the basin) to guarantee control over ground water pumping in the basin. On September 28, 1962, the Court signed the "Order Pursuant to Stipulation and Interim Agreement and Petition for Order" and appointed the Department of Water Resources as Watermaster.

In order to avoid the protracted litigation experienced in the two other watermaster service areas in Los Angeles County, the attorneys representing principal parties held monthly meetings to work toward settlement of the action. A stipulated judgment was drafted by the attorneys at these meetings. Signatures of approval obtained from public utility water companies and other producers represented well over 200,000 acre-feet (75 percent) of the total rights within the basin. This was a prerequisite to filing the stipulated judgment with the Court.

A pretrial was held in March, and on May 17, 1965, the case went to trial before the Honorable Edmund M. Moor. After hearing a week's testimony on engineering, geology, hydrology, safe yield of the basin and arguments on water right entitlements, the case was continued to August 25, 1965. Shortly thereafter, Judge Moor appointed the California State Department of Water Resources, Watermaster. The final Judgment was signed on October 11, 1965, and became effective on October 1, 1966.

Central and West Basin Water Replenishment District

The Central and West Basin Water Replenishment District (C&WBWRD) is a very active water conservation organization in Los Angeles County. The Replenishment District is responsible for replenishing the underground water supply of both Central and West Coast Basins.

The creation of water replenishment districts is a statutory procedure established by the California Legislature. Division 18 of the California

Water Code describes the duties and obligations of a water replenishment district. Such districts have powers extremely well suited for solving ground water problems whether the problem be quality or quantity oriented.

The Central and West Basin Water Replenishment District is comprised of a Board of Directors and a small staff to carry out the directives of the Board. The District is actively engaged in several replenishment programs. Several of these programs (i.e. water spreading, barrier operation, and in lieu replenishment) are described later in this report. The District also publishes an annual report of its yearly operations during February or March of each year. If you are interested in learning more about the Water Replenishment District, please contact the District's staff at 7439 East Florence Avenue, Downey, California 90240.

The Watermaster cooperates very closely with the Central and West Basin Water Replenishment District for many reasons:

1. Watermaster Service areas in Central and West Coast Basins closely coincide with Water Replenishment District boundaries.
2. Both the District and the Watermaster are required to record all ground water extractions from the basins.
3. The Replenishment District was the Plaintiff in the Central Basin Water Rights Case (Case No. 786,656, Superior Court, Los Angeles County).
4. Both the District and the Watermaster are concerned with the usefulness of the ground water basins on the Coastal Plain.

Many of the Watermaster's data collection programs are coordinated with the District to prevent wasteful duplication. Hence, your monthly or quarterly water well report is mailed to the District and forwarded to the Watermaster. We would like to thank the District's staff for its close and continuing cooperation with the Watermaster.

Activities of the Watermaster

The Watermaster has now administered the Central Basin Judgment for a number of years. Always, the focal point of activity has been the annual report to the Superior Court and the parties. The annual report is replete with information gathered throughout the water year; so much information, in fact, that it has become necessary to use electronic data processing machines extensively. It is felt that the speed and accuracy of machines easily offset the small expense charged for machine rental.

Once a month, every ground water pumper reports his ground water extractions to the Watermaster. This makes possible updating of his water right

account (Watermaster Water Production Summary) by computing the amount pumped during the previous month, the total amount pumped during the current water year, and the amount that can legally be pumped during the remainder of the year. A copy of the updated account is then mailed to the pumper.

Occasionally, the Summary will indicate a pump and/or water meter malfunction. If electric meter readings are reported along with water meter readings, electric power consumption can be correlated with water production. Erratic or rapidly increasing electric power consumption vs. water production, for instance, may suggest an inefficient pump, system losses, or an inaccurate water meter.

The Watermaster field staff calibrates the water meter on every active water well at least once every two years. Accurate measurement of ground water extractions is absolutely necessary to the success of the Basin's management plan. All available means, including system efficiency tests, are used to confirm water meter test results. Inaccurate meters must be repaired within thirty days. Follow-up tests and initial tests on new wells are scheduled whenever necessary. One copy of each test is furnished to the well owner and another copy is retained by the Watermaster for comparison with future tests.

During the 1967-68 water year, the Watermaster evaluated historical ground water production records of several parties. All but one of the reviews were routine and resulted in minor uncontested changes in the record.

However, the Plunkett Water Company requested a review of its historical ground water production records on April 28, 1968. After an extensive investigation, the Watermaster published its findings in a letter to Mr. Donald R. Plunkett on October 29, 1968. Mr. Plunkett immediately objected to the Watermaster report. On November 22, the Watermaster answered Mr. Plunkett's objection by supporting its initial findings.

Mr. Plunkett answered on December 5 and demanded that the Watermaster's findings be rejected in favor of his conclusions. He further requested that the Watermaster's findings not be included in this report.

The Watermaster has incorporated its findings in this report to reflect the record as of September 30, 1968. However, Mr. Plunkett's objections are being considered and a conclusion is expected by January 1969. A complete report will be included in next year's annual report.

These are the major activities of the Central Basin Watermaster. Of course, there are many others--but most do not require enough time to be considered major activities. Therefore, instead of trying to list them, the report will continue with the results of the various activities.

Summary of Operating Conditions

Water supply and demand conditions did not change appreciably from the prior water year. Ground water extractions amount to about 210,000 acre-feet

annually. Imports continue to increase each year, as water requirements grow and additional supplemental sources are developed. Table 1 compares statistics for the last two water years and confirms that operating conditions are virtually unchanged from the prior water year.

TABLE 1
WATER YEAR SUMMARIES

Item	Water Year	
	1966-67	1967-68
Parties	508	488
Active pumpers	462	437 ^{a/}
Active nonparties	34	38
Allowed Pumping Allocation, in acre-feet	217,367	217,367
Watermaster expenses	\$57,464.12	\$45,123.24
Water expenses per acre-foot pumped	\$.27	\$.21
Rainfall, in inches	18.50	12.24
Spreading operation	161,435 acre-feet	154,056 acre-feet
Extractions	206,591 acre-feet	219,945 acre-feet
Imports	129,424 acre-feet	140,362 acre-feet
Exports	35,160 acre-feet	37,011 acre-feet
Total Water Use	300,855 acre-feet	323,296 acre-feet

a/ 186 report monthly, 251 report quarterly.

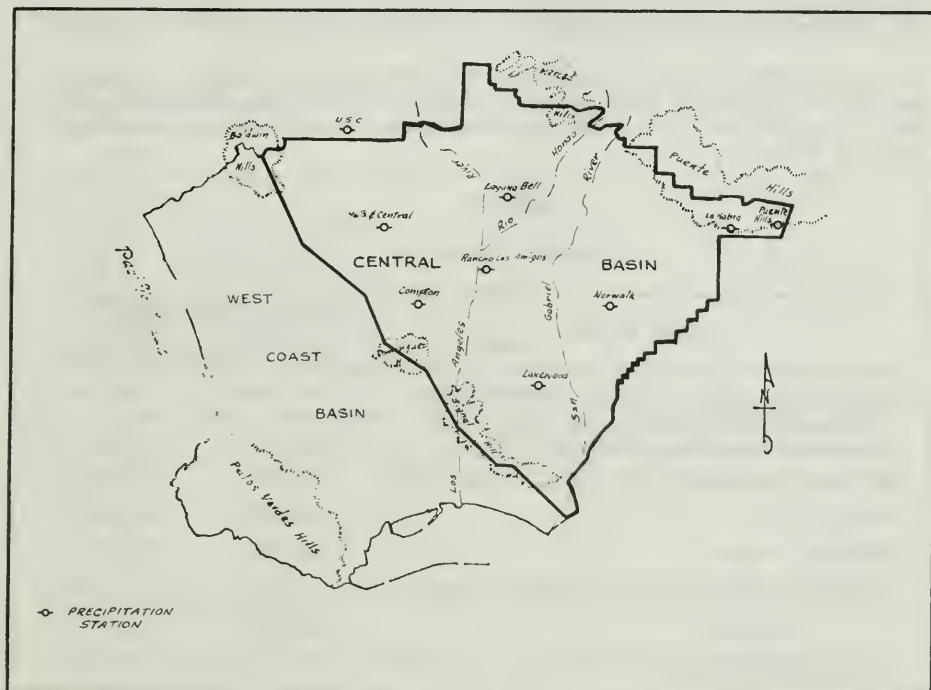

One hundred thirty-six parties overextracted a total of 3,442.81 acre-feet during the 1967-68 water year. Eighty-seven of these parties overextracted by less than the 10 percent or 2 acre-feet limited by the Judgment. Thirteen of the forty-nine remaining parties purchased sufficient water from the 1968-69 Central Basin Exchange Pool to meet its needs. Specific recommendations for further action against these parties are included in Chapter 4.

CHAPTER II. WATER SUPPLY CONDITIONS

Water from many sources is required to serve the needs of Southern California's thriving urban economy. Water from the Colorado River, water from the Owens River, runoff from the mountains, ground water, reclaimed waste water, and desalination plants along the coast contribute to one of the largest, most reliable water supply systems in the world. Soon, water from Northern California will be available. Even so, current forecasts indicate that additional supplies must be found and developed by 1990 to prevent possible shortages. This chapter explores the sources and uses of current supplies and their effect on water conditions in the Central Basin.

Precipitation

Southern California enjoys a Mediterranean-type climate characterized by hot, dry summers and sparse precipitation during the winter months. The average rainfall on the Central Basin last year was 12.22 inches, about 66 percent of the 18.50 that fell the year before. The mean seasonal precipitation (base period 1897-1947) varies from 12 inches at Long Beach to 16 inches at Whittier Narrows. The locations of the precipitation stations, used to determine the basin average are shown below.

Local precipitation does not influence the ground water supply of the Central Basin to any great degree. A layer of impermeable material lies between the surface and the producing aquifers except in the forebay areas. Almost none of the annual rainfall reaches the zones from where it can be pumped back to the surface. This inability of rainfall to replenish the ground water supply contributed to the initial overdraft of the Central Basin.

Ground Water Recharge

Overdraft is a condition where water is removed from a ground water basin faster than it can be replenished by natural processes. Ground water aquifers usually recharge themselves so slowly that a few years of concentrated pumping may upset a balance that took centuries to establish. Basically, this is the situation that existed in the Central Basin several years ago.

Natural replenishment of the basin's ground water supply is limited to inflow through Whittier Narrows (and some underflow) from the San Gabriel Valley. Some of the water that percolates into the forebay areas of Central Basin eventually crosses the Central-West Coast Basin barrier and into the West Coast Basin. For several years now, outflow and extractions have exceeded replenishment thus upsetting the basin's balance.

Today, attempts are being made to re-establish nature's balance. One method is water spreading. Water is flooded on areas where it can percolate into the underground aquifers and supplement the natural recharge supply. Large quantities of water can be returned to the ground by spreading water, but the process is limited by the space available for spreading facilities and the ability of the recharge aquifers to transmit water back to the basin.

The Los Angeles County Flood Control District (LACFCD) operates spreading grounds along the Rio Hondo and San Gabriel Rivers in the Montebello forebay of the Central Basin. The entire spreading operations is summarized below in Table 2.

TABLE 2
SPREADING OPERATIONS

Water Source	: Quantity in Acre-Feet	
	: 1966-67	: 1967-68
	: Water Year : Water Year	
Metropolitan Water District (MWD) water purchased with Central and West Basin Water Replenishment District funds	10,180	28,799

Alamitos Barrier Project

The Alamitos Barrier Project is of great importance to water users in the Central Basin.

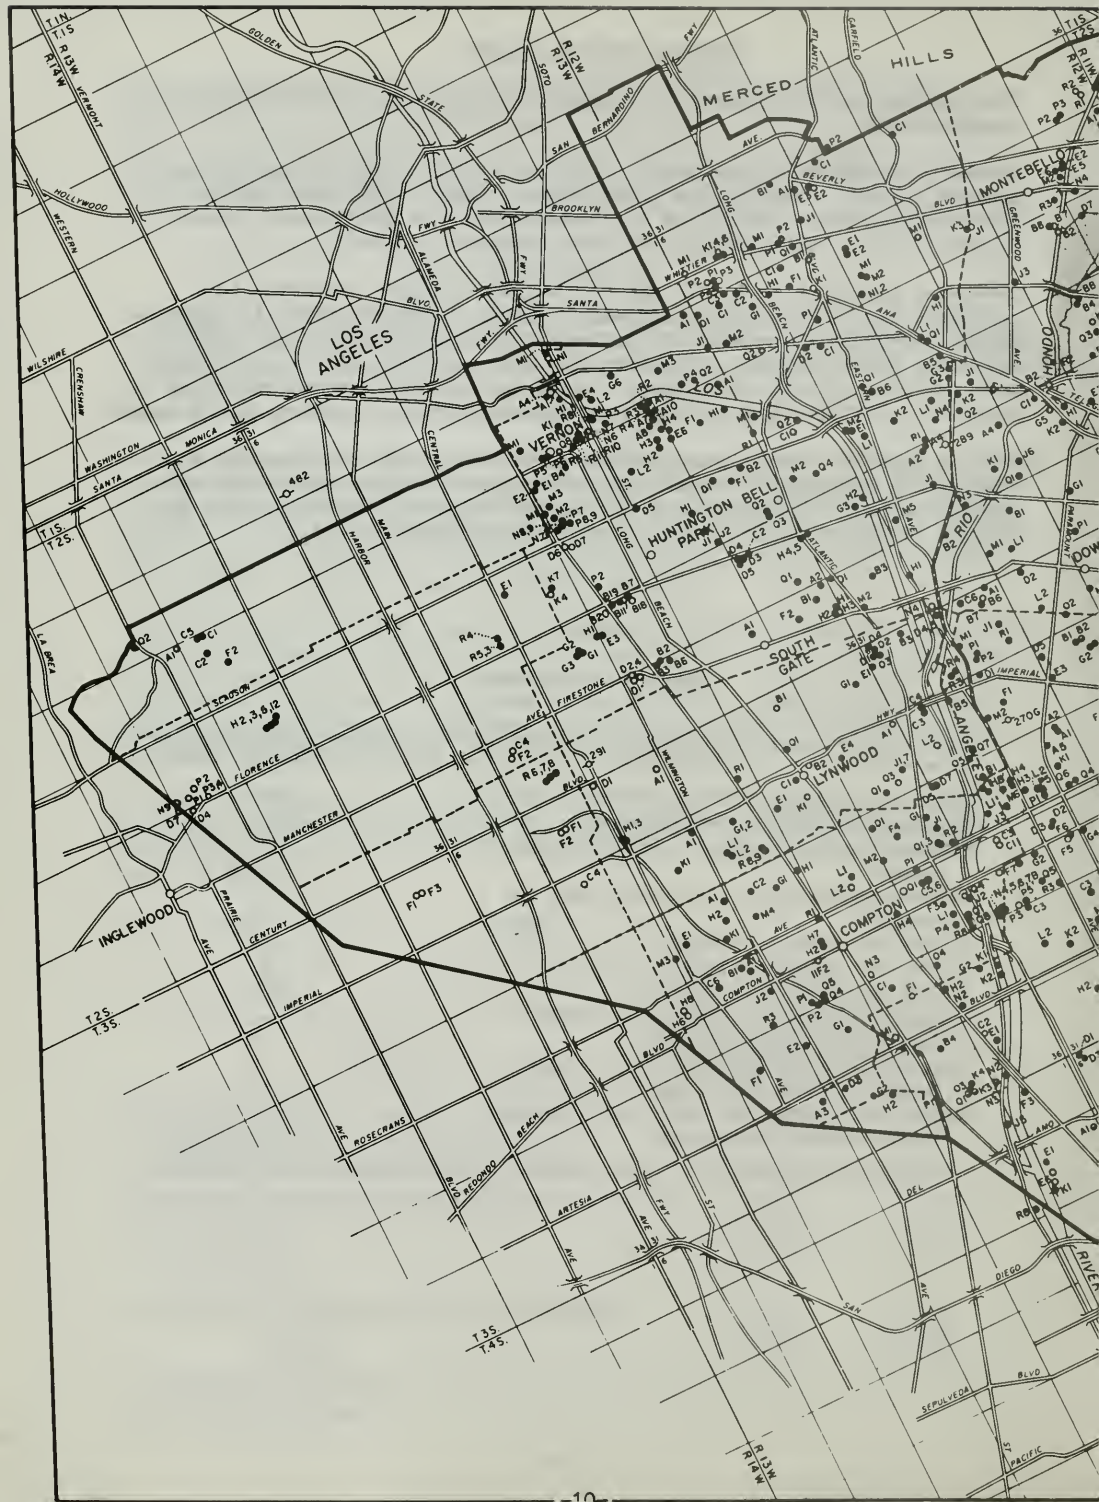

Sea-water intrusion at the mouth of the San Gabriel River (Alamitos Gap) poses a serious threat to the ground water supply. This area has six water-bearing zones identified in downward order as the C-Zone, B-Zone, A-Zone, I-Zone, Silverado aquifer, and Sunnyside aquifer.

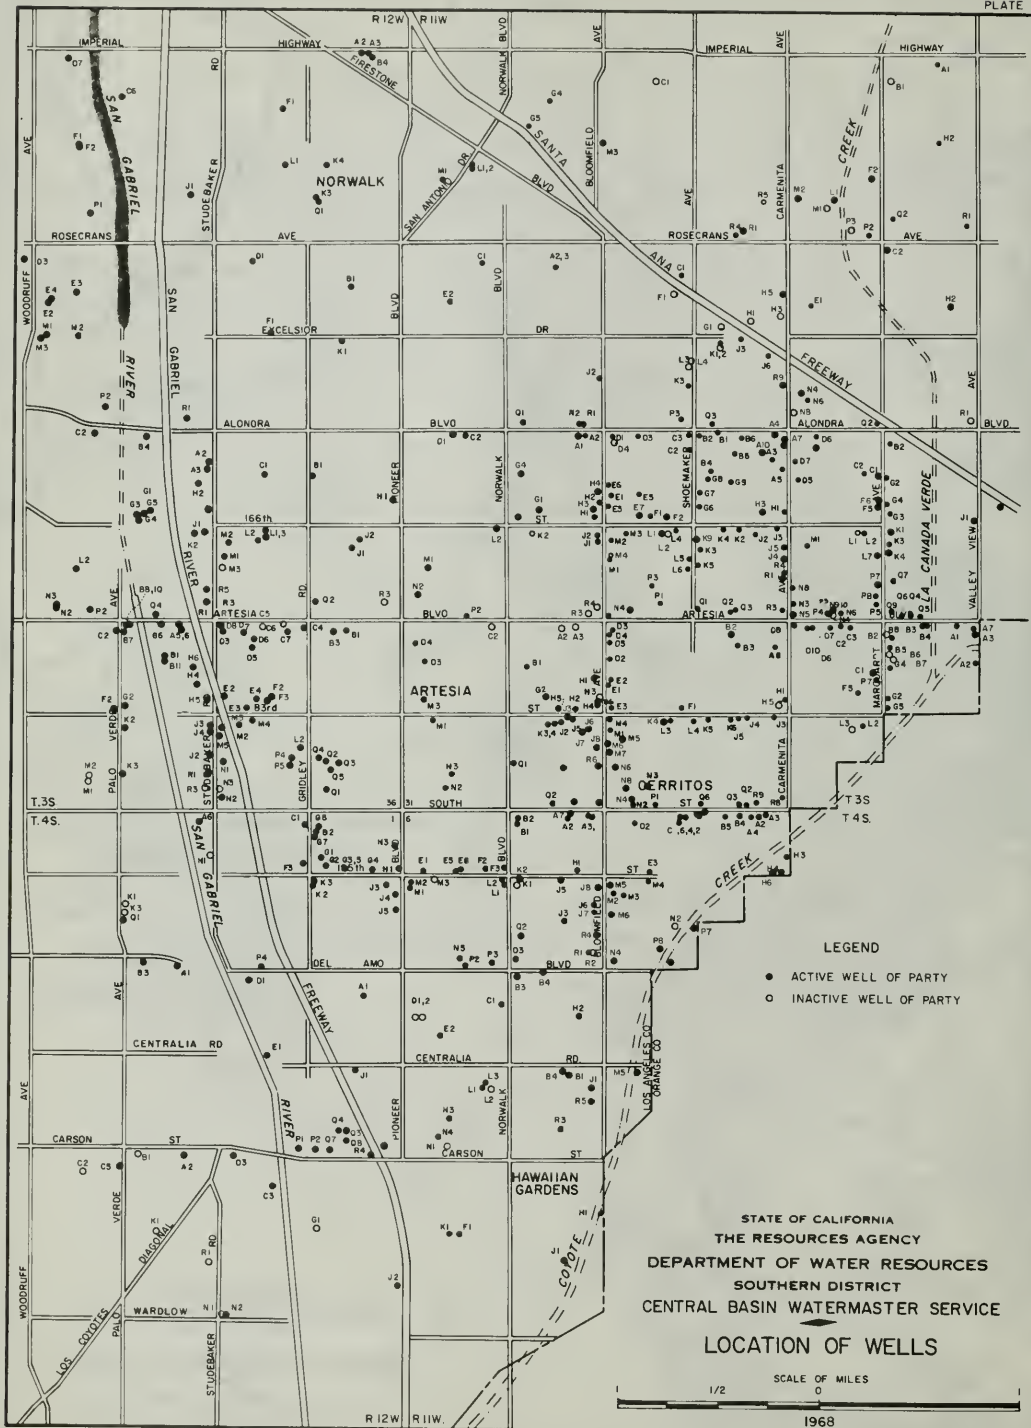

Sea-water intrusion occurs in the C-, B-, and A-Zones. Chloride ion concentrations in the A-Zone indicate that the intrusion front is approximately 10,000 feet landward of the Newport-Inglewood fault zone. If the sea-water front proceeds unchecked, the upper aquifers (C-, B-, A-Zones) may provide a path for poor quality water moving into the Silverado and Sunnyside aquifers (the principal ground water producing zones in the basin).

The Los Angeles County Flood Control District (LACFCD) now operates a combination extraction trough-fresh water pressure ridge barrier to halt the intrusion. The location of the barrier is shown on Plate 1 page 10 Table 3 shows the scope of the Alamitos Gap Barrier Project.

TABLE 3
BARRIER OPERATIONS

Operation	: Alamitos Gap
Quantity injected, in acre-feet	5005
Quantity extracted, in acre-feet	1676
Average injection rate, cubic feet per second	6.9
Average extraction rate, cubic feet per second	2.3
Number of extraction wells	3
Number of injection wells	17
Number of observation wells	175
Number of injection wells to be added during 1968-69 water year	0
Number of extraction wells to be added during 1968-69 water year	1
Number of observation wells to be added during 1968-69 water year	17

The LACFCD furnished the spreading operation summary and the barrier information tabulated in Table 3. The Watermaster sincerely thanks the LACFCD staff for its cooperation and assistance.

Construction Projects Affecting Water Supply

There are three major construction projects currently in progress that will significantly affect the Central Basin's water supply. These projects are:

1. The California State Water Project. This greatest water project ever undertaken will bring water from the Feather River in Northern California to Southern California by 1971.
2. The Metropolitan Water District's proposed additions to its distribution system. Important parts of the addition are the Second Lower Feeder and the South Coast Feeder. Each will carry Northern water into the Central Basin.
3. The City of Los Angeles is currently constructing the second barrel of its Owens River-Mono Basin Aqueduct. The second barrel will actually terminate in the San Fernando Valley but some of the Owens River water eventually crosses the Santa Monica Mountains and moves southeastward into the Central Basin.

One other project of considerable interest to Central Basin water users is the Los Angeles County Joint Sanitation District's plan to reclaim waste water. Considerable benefit from spreading reclaimed water in the forebay areas of Central Basin may eventually materialize. There is also speculation that reclaimed water may be used to operate the sea water barrier project in the basin.

Water Quality

Perhaps the largest single problem facing mankind today is pollution control. There are many sources of pollution and many types of pollution. Pick up any newspaper or national magazine; the odds are that it will have an article on pollution. Most of the articles deal with air pollution and surface water pollution. However, it is no secret that even underground water is endangered by pollution.

The battle for good quality water in the Central Basin began many years ago. In fact, it was essentially a water quality problem that prompted the Central Basin litigation. Many of the aquifers underlying the Los Angeles Coastal Plain are separated from each other by impervious material. However, some of the aquifers are hydraulically connected to the ocean, so occasionally one may become polluted with sea water. If a well

is drilled downward through two aquifers, one clean, one polluted, without using proper casing techniques, water can move from the polluted aquifer to the unpolluted one. Obviously, this is an undesirable condition.

The Department of Water Resources has long recognized that such a condition should be prevented. After an extensive investigation, the Department published Bulletin No. 74, "Water Well Standards: State of California" in February 1968, and Bulletin No. 74-4, "Water Well Standards - Central, Hollywood, Santa Monica Basins, Los Angeles County" in August 1968. Even now, Bulletin No. 74-4 standards are being adopted by local agencies and municipalities in the Central Basin. The Los Angeles Regional Water Quality Control Board No. 4 will hold hearings in the adoption of these standards in 1969. The Watermaster urges unanimous adoption in the basin to preserve and protect your valuable water supply.

The Department of Public Health, Bureau of Sanitary Engineering recently published an "Investigation of Ground Water Quality Problems in the Central Basin of Los Angeles County". If you are interested in the ground water quality of the Central Basin, we recommend that you read this report. It discusses many of the water quality problems that already face water users in the Central Basin, and calls for further investigation by various agencies.

Solid waste disposal has become a major problem in Southern California during the past 25 years. Today, the average Californian is generating five pounds of solid waste every day of the year. It must be disposed of somewhere.

Suitable dumpsites are becoming more difficult to find each year--particularly in urban areas. In recent years, tremendous pressure to use abandoned gravel pits for dumpsites has materialized.

Fortunately, for water users, there is an intense, well-organized campaign against such practices throughout the Los Angeles area. The Central and West Basin Water Replenishment District, Central Basin Water Association, and various other agencies have vigorously opposed all applications for permission to operate sanitary landfill programs in the Central Basin. Opposition to the use of gravel pits as dumpsites will undoubtedly continue until fool-proof sealing methods are developed to prevent pollution of ground water by leachates.

Ground Water Levels

Every water well owner in the Central Basin has a keen interest in the location of the ground water surface. After all, the cost of pumping water is largely dependent on the distance the water must be lifted.

Figure 1 shows water level information in the form of selected hydrographs. Location of these key wells are shown in Plate 1 page 10. These particular hydrographs are representative of the several aquifers underlying

the basin. In general, they show that the water surface has stabilized and, in some, cases, risen slightly because of recharge operations and changing extraction patterns.

Additional water level information is contained in the annual report published by the Central and West Basin Water Replenishment District.

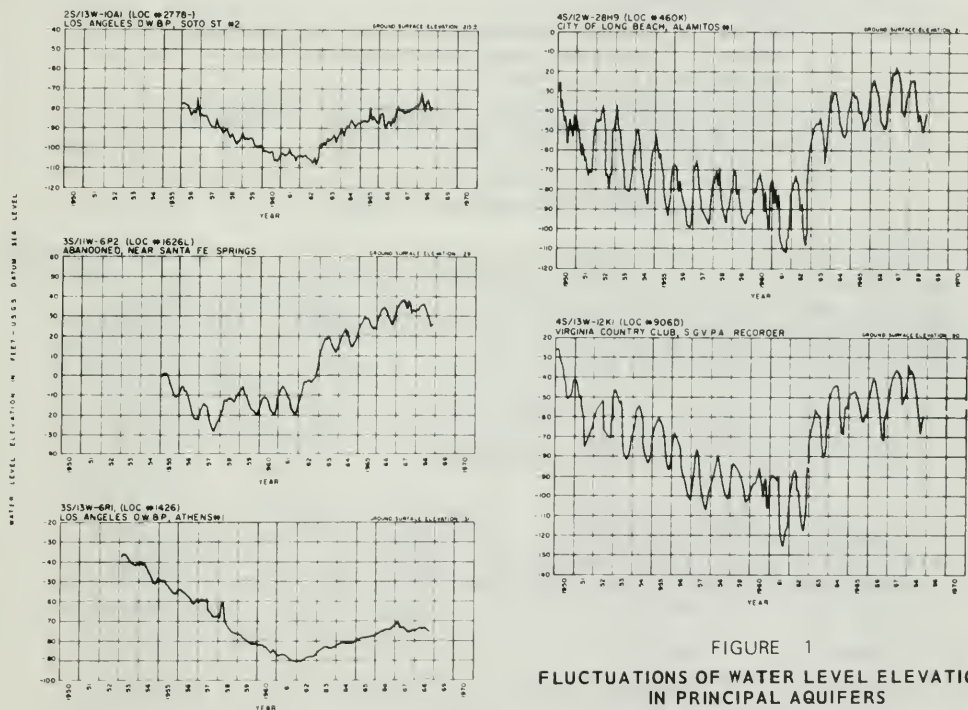

FIGURE 1
FLUCTUATIONS OF WATER LEVEL ELEVATIONS
IN PRINCIPAL AQUIFERS

In Lieu Replenishment

Three years ago, during the 1965-66 water year, the Central and West Basin Water Replenishment District began a program of in lieu replenishment. The program is authorized by Section 60230 of the California Water Code.

In effect, the Replenishment District was given the power to contract with any producer having access to supplemental water to have the producer use supplemental water instead of pumping water from the ground.

The District's program of in lieu replenishment has the following benefits:

1. It may be used to alter pumping patterns within a ground water basin.
2. It may be used to replenish areas of low transmissibility where conventional recharge techniques are ineffective.
3. It may be used to heighten the effect of injecting water to form a sea water barrier by reducing extractions in the vicinity.
4. It may be used to reduce the amount of replenishment water purchased by the District.
5. It may be used to reduce the annual ground water extraction from a ground water basin.

When the District first announced its intention to begin the in lieu replenishment program several Central Basin producers expressed an interest. However, the only producer to actually participate in the program has been the California Water Service Company in the West Coast Basin. The results of the program are summarized below.

TABLE 4
IN LIEU PUMPING

Water Year	: Amount Contracted : To In Lieu : Replenishment Program	: Contract Price, : Dollar Per : Acre-Foot	: Total : Payment
1965-66	744.59	\$ 12.33	\$ 9,180.79
1966-67	850.47	14.14	12,027.06
1967-68	850.00	13.36	11,356.00

Although the in lieu replenishment program is not currently being used in the Central Basin, the Watermaster believes that the program is an effective basin management tool. Significant beneficial effects could result from the program. Anyone interested in learning more about the program should contact the Central and West Basin Water Replenishment District.

CHAPTER III. WATER USE

During the 1967-68 water year, water purveyors in the Central Basin served more than 323,296 acre-feet of water to their customers.

A rapid population increase in the Central Basin area has caused the water demand to increase substantially each year. Prior to 1961, ground water from the Central Basin served most of the demand. However, the Judgment reduced extractions to about 215,000 acre-feet annually, so imported water rapidly became an important component of the area's water supply.

Figure 2 (page 18) graphically illustrates the annual ground water extraction and total water use from 1952 to the present. Much of the increased imported water demand during the past six years may be directly attributed to the curtailment of ground water extractions.

Figure 3 (page 19) provides another graphical analysis of the monthly relationship between rainfall, ground water extractions, and imported supplies. It is quite obvious that climatic conditions play an important role in water demand. Plates 3, 4, and 5 (pages 20, 22, 25) show the service area where each party uses its water supply.

Ground Water Extractions

The Central Basin Judgment limits the amount of ground water each party can extract annually from the Basin, or release to the Exchange Pool for pumping by other parties. Recipients of exchange water may pump the amount released to them in addition to their Allowed Pumping Allocation. Table 5 (page 26) is a balance sheet summarizing each party's "water account" by listing its Allowed Pumping Allocation (see Appendix A for any changes), carryover, exchange pool transaction, and ground water extraction during the 1967-68 water year.

In order to provide flexibility in the control of ground water extractions, the Judgment contains various provisions allowing the parties to carry over into the succeeding water year a portion of their unused water right and in some cases to overextract. This flexibility was necessary to meet unforeseen emergencies in water demands.

First of all, one provision allows parties to carryover from one water year to another any unused Allowed Pumping Allocation up to an amount not to exceed ten percent of that party's Allowed Pumping Allocation or 10.00 acre-feet, whichever is greater. There is also a provision that allows, under certain circumstances, parties to overextract, i.e., if in good faith they underestimate their water requirements for that year. However, the allowable extraction in this case is limited to ten percent of the party's Allowed Pumping Allocation or two acre-feet, whichever is greater. In addition, any unused exchange pool water can be carried over into the following water year. Chapter 4 contains additional information on this provision.

a/ See Appendix A and Tablall for information on leases, revised water right entitlements, or prior ownerships.

b/ Includes Exchange Pool under carryover.

c/ Extractions listed under the Roman Catholic Archbishop of Los Angeles.

d/ Juan De Cordova well used by Associated Southern Investment Company, Art Edwards, and Juan De Cordova.

e/ Production reported monthly as well as quarterly in Appendix B, Table B-1 and must be added together for total ground water extractions.

f/ Ground water extractions reported by Jake and Lena De Jong from well No. 2 is one-half chargeable to Bank of America National Trust and Savings Association, Trustee by Will of Tony V. Freitas and one-half chargeable to De Jong.

g/ Includes the following extractions by parties whose water rights have been acquired by City of Carrizito:

	Amount, in acre-feet	Amount, in acre-feet
Bouman, Sam (Warrington Construction Company)	0.70	0.45
De Groot, Pier and Fay (Landmark Estates, Incorporated)	2.69	1.48
De Jager, Edward and Alice (Georgia Land Company)	10.11	0.96
Fikse, Harry and Jennie	0.98	1.05
General Telephone Company of California	0.62	2.20
Hoffman, Harry H. and Apollonia (Warrington Construction Company)	4.26	
Marlowe, Walter and Edna		
Shattuck, J. R. and Debra		
Somersat Land Company		
Susa Homes, Incorporated and Nava Homes, Incorporated		
Van Ruiten, Pete and Mary (Casa de la Queste)		

1/ Includes 349.75 acre-feet extracted from the Lakewood Golf Course well by Los Angeles County Parks and Recreation Department. Exchange Pool water is purchased to offset this extraction.

2/ Los Angeles County has an inter-agency exchange pool whereby all water right balances are combined and divided between the agencies in proportion to their need of water right.

3/ Ray Mitchell is a neaparty and a tenant of Charles E. Adams, Corporation of the Presiding Bishop of the Church of Jesus Christ of Latter Day Saints, Frank and Vada Ruszneri, William J. Schworer, and Viseer Brothers Properties.

4/ Elmo D. and Evalene E. Murphy extracted 4.53 acre-feet which was chargeable to Morris and Bessie Weiss.

5/ Frank J. Rose and John J. Williams share same well on a fifty-fifty basis.

The metered ground water production from each active well in the basin is listed by party in Appendix B, Tables B-1 (page 106) and B-2 (page 123). This tabulation shows the total ground water production as reported by each party. Table B-1 lists parties that report on a monthly basis. Table B-2 lists parties that report on a quarterly basis. The location of the wells where ground water was extractioned is shown on Plates 1 and 2, pages 10 and 12.

Extractions by Nonparties

In order to keep the parties and the Court apprised of all ground water extractions within the Central Basin, the Watermaster collected information on nonparty ground water extractions. The nonparties were not named in the Central Basin Judgment and as such are not under the jurisdiction of the Watermaster.

The ground water extractions, as reported to the Central and West Basin Water Replenishment District, are shown on Table 6.

Water Wells in the Central Basin

Each water well in the Central Basin is assigned a state well number to simplify locating the well. A state well numbering system was adopted several years ago which utilized the United States Public Land Survey System. A graphical illustration of the system in the Central Basin is shown below.

Each state well number consists of a township, range, and section number; a letter to indicate the 40-acre plot where the well is located; a number to identify the particular well in a section; and the letter "S" indicating that the well location is referenced to the San Bernardino Base and Meridian.

For instance, state well number 4S/13W-33N01S would be the first well assigned a number in Township 4 South, Range 13 West, Section 33, and in the 40-acre Tract "N". All wells in Los Angeles are referenced to the San Bernardino Base and Meridian, so the letter "S" is sometimes dropped in this report.

Imported and Exported Supplies

Earlier it was noted that large quantities of water are imported to the Central Basin from other sources. Water from the Colorado River arrives through the facilities of the Metropolitan Water District of Southern California for distribution by the Cities of Long Beach, Los Angeles, Compton, the West Basin Municipal Water District and the Central Basin Municipal Water District. The City of Los Angeles also imports water from the Owens River-Mono Basin in east Central California. In addition, the City of Inglewood imports ground water from the West Coast Basin and the City of Whittier and the Suburban Water Company import ground water from the San Gabriel Basin.

Exports from the Central Basin are very small when compared to imports. The City of Long Beach exports blended ground water and Colorado River water to the West Coast Basin, while the California-American Water Company, Dominguez Water Company, and the City of Signal Hill export ground water to the West Coast Basin. All Central Basin imports and exports are listed in Table 7.

a/ Colorado River water.

b/ Colorado River water and West Coast Basin ground water.

c/ Colorado River water and Owens River-Mono Basin water.

d/ Excludes imports by City of Whittier - 8,192 acre-feet (1966-68); 8,775 acre-feet (1967-68) and Suburban Water Systems - 11,574 acre-feet (1966-67); 12,667 acre-feet (1967-68).

e/ Central Basin ground water.

f/ Colorado River water and Central Basin ground water.

CHAPTER IV. ADMINISTRATION OF THE JUDGMENT

The Central Basin Judgment was a logical step toward preserving the usefulness of a valuable natural resource. It provided a flexible tool to limit extractions and still allow beneficial use of the ground water supply. However, the limit on ground water extractions imposed by the Judgment forced the parties to look for other supplies. Fortunately, other sources of water were available. If they had not been, the rapidly increasing demand for water might have literally bankrupted the basin before other basin management techniques could have been developed.

Exchange Pool

The Court and parties foresaw that adjudicating the water rights in the Central Basin and limiting the total extraction would not be satisfactory to all parties. Part III, Subpart C of the Judgment authorized a water Exchange Pool to provide additional water rights for members without a supplementary supply.

Each year, during October and November, the Watermaster opens the Exchange Pool to permit inter-member water right leases in accordance with the Judgment. Membership in the Exchange Pool is voluntary, and any party can join by filing a "Notice of Intention to be Bound by the Exchange Pool" (or a completed Exchange Pool form) with the Watermaster and the Court. Tables 8 (page 38) and 9 (page 40) summarize the 1967-68 water year Exchange Pool transactions.

Each member is asked to complete an Exchange Pool form. First the member estimates his water requirement and supply for the appropriate water year. If the member has a connection to the Metropolitan Water District or the Central Basin Municipal Water District, and his total supply (including Colorado River water) exceeds his estimated requirement, the member must offer ("Required Offer") to release a portion of his pumping right to the Pool. The Required Offer should be 20 percent of the member's Allowed Pumping Allocation. However, the Required Offer plus the estimated requirement absolutely cannot exceed the party's total supply. The Required Offer is limited to an amount which can be replaced with Colorado River water.

There is another type of offer called the "Voluntary Offer". Any member may voluntarily offer pumping rights to the Exchange Pool. The only requirement: the member's supply must exceed his estimated requirement and only the difference may be offered. However, the Watermaster must allocate all the Required Offers before using the Voluntary Offers so the amount used each year is small.

The price a member may charge for either type offer is fixed by Part III, Subpart C, Paragraph 10 of the Judgment. The price is based primarily on the cost of water from the Central Basin Municipal Water District and the pumping tax set by the Central and West Basin Water Replenishment District. The cost computation for the 1967-68 Exchange Pool is shown on page 44. Since the price of water set by Central Basin Municipal Water District and Central and

Formula for Computing Price of
1967-68 Central Basin Exchange Pool Water

(1) Cost of water from Central Basin Municipal Water District (variable rate)	\$44.00	
(2) Plus (fixed rate)	2.00	\$46.00
Less:		
(3) Average incremental cost of pumping (fixed rate)	\$ 7.00	
(4) Replenishment assessment (variable rate)	6.11	
		- 13.11
Price per acre-foot for subscription utilized		\$ 32.89

West Basin Water Replenishment District vary from year to year, the cost of Exchange Pool water cannot be accurately predicted. Undoubtedly the cost will continue to rise in future years.

If a member's estimated requirement exceeds his total supply (including leases), he may request the difference from the Exchange Pool. The cost per acre-foot is the same as the price determined by the above formula and described in the preceding paragraph. The Exchange Pool transactions shown in this report were for the 1967-68 water year and should not be confused with the 1968-69 Exchange Pool recently completed.

Exchange Pool Carryover

Chapter II pointed out some of the variables that affect water use. Again, we should like to emphasize the impact of climate, culture, business condition and recreational demand on water use--and the difficulty of estimating future water requirements. Hence, the inclusion of an Exchange Pool carryover clause in the Central Basin Judgment.

The Central Basin Exchange Pool provides additional pumping rights to parties at a relatively high price. The authors of the Judgment therefore believed that the parties should be allowed to pump their entire exchange water purchase regardless of the provisions limiting carryover of water rights. Therefore, a specific exchange water carryover provision was drafted and included in the Judgment.

The clause specifically allows a party that purchased exchange water to carryover the unpumped portion of its allowable extraction until all of the exchange water is pumped. Table 10 (page 46) lists each party that carried exchange water into the 1967-68 water year, and the amount of water carried forward. Table 10 also shows the amount charged to each party for the privilege of carrying over exchange water. The charge is authorized by the Judgment and is based on the difference in the prices of exchange pool water between the year the water was purchased and the year the water was carried forward to. Table 5 (page 26) also shows those parties having a carryover of exchange water from the 1967-68 to 1968-69 water year.

Transfers of Allowed Pumping Allocations

The Central Basin Exchange Pool is not the only method of obtaining additional pumping rights. Each water year there are several lease and sale transactions between parties. Table 11 (page 47) lists all 1967-68 transactions.

Please note the suggested samples copies of lease and sale agreements which follow Table 11 (page 53-54). They have been prepared because most of the documents received by the Watermaster are lengthy and unnecessarily complex. The Watermaster recommends that all documents be prepared on 8-1/2 x 11-inch paper and any necessary additions to the recommended agreement be typed on another page, and attached.

WATER RIGHT LICENSE AND AGREEMENT

JOHN DOE hereby grants to BILL SMITH: a license to extract _____ acre-feet of licensor's Allowed Pumping Allocation allocated to licensor (or predecessors in interest) under and pursuant to Judgment dated October 11, 1965 and entered in Los Angeles Superior Court Case No. 786,656 entitled "Central and West Basin Water Replenishment District vs. Charles E. Adams, et al." during the period commencing October 1, 19__ and continuing to and including September 30, 19__.

Said License is granted, subject to the following conditions:

- (1) Licensee shall exercise said right and extract the same on behalf of JOHN DOE during the period above specified and put the same to beneficial use and licensee shall not by the exercise hereunder of said right acquire any right to extract water independent of the rights of licensor.
- (2) Licensee shall pay assessments levied on the pumping of said ground waters by the Central and West Basin Water Replenishment District.
- (3) Licensee shall notify the District and the Watermaster that said pumping was done pursuant to this license and provide the Watermaster with a copy of the document.
- (4) Licensee shall note, in any recording of water production for the period of agreement, that said pumping was done pursuant to this license.

JOHN DOE warrants that he has _____ acre-feet of Allowed Pumping Allocation and that he has not pumped and will not pump or permit or license any other person to pump any part of said _____ acre-feet during period of October 1, 19__ through September 30, 19__.

DEED OF WATER RIGHTS

For a valuable consideration, BILL SMITH hereby sells and transfers to the JOHN DOE COMPANY:

The Right to extract _____ acre-feet of grantor's Allowed Pumping Allocation allocated to grantor (or predecessors in interest) under and pursuant to Judgment dated October 11, 1965 and entered in Los Angeles Superior Court Case No. 786,656 entitled "Central and West Basin Water Replenishment District vs. Charles E. Adams, et al."

You need not use these sample documents if your legal representative does not approve, but they are sufficient for most purposes and have the features of being short and easily understood.

Overextractions

Each year some parties extract more water from the Central Basin than they are entitled to. The overextractions are usually small, within the tolerance set by the Judgment. Each party may overextract by 2 acre-feet or 10 percent of its Allowed Pumping Allocation, whichever is greater, on the premise that the overextraction will be eliminated during the following water year. Any overextractions above this limit must have prior approval by the Watermaster. Most overextractions are the result of an unexpected increase in water demand so it would be unreasonable not to allow some deviation from the limits and guidelines of the Judgment. Table 12 (page 56) summarizes all overextractions during the 1967-68 water year.

Several parties overextracted early in the 1967-68 water year. The Replenishment District and the Watermaster advised many of these parties of the consequences of over-pumping. Footnotes in Table 12 (page 56) indicate the parties that received letters and subsequently overextracted. However, the Watermaster recommends that no action be taken against any of these parties if:

1. They eliminated the deficit existing on October 1, 1968 by purchasing water from the 1968-69 Central Basin Exchange Pool.
2. They promptly advise the Watermaster of their proposed method for eliminating their deficit.

The parties listed below are in definite violation of the Central Basin Judgment.

Abbott, J. P., Incorporated
Contreras, R. M.
Erickson, John A.^{a/}
Godinho, Pauline, Estate of^{a/}
Kamstra, William and Bertha
Mussachia, Tony and Anna

Plunkett, Donald R.^{a/}
Te Velde, Harm and Zwaantina
Van Dam, Gertrude
Wiersma, William and Elbra^{a/}
Yamamoto, George and Alice
Zivclonchi, George and Antonio^{a/}

^{a/} Party was in violation during 1966-67 water year also.

The Watermaster feels that with the exception of the above parties, most parties are seriously attempting to resolve their water problems. Every possible solution should be attempted before Court action is initiated.

- ^b No permission to overextract requested or approved by Watermaster. Party in violation of Judgment.
- ^c Permission to overextract by this amount in 1966-67 requested by this party and approval was given by Watermaster.
- ^d Permission to overextract was requested by this party and approval was given by Watermaster.
- ^e Advised by Watermaster or Central and West Basin Water Replenishment District of possible overextraction.
- ^f No permission to overextract by this amount in 1966-67 requested or approved by Watermaster. Party was in violation of Judgment.
- ^g Not in violation of Judgment as it did not exceed its allowable 2 acre-foot overextraction.
- ^h This party did not request permission to overextract and is in violation of the Judgment. However, it has taken steps to eliminate its overextraction.

CHAPTER V. ADMINISTRATIVE COSTS

The Central Basin Area was established as a "Watermaster Service Area" in accordance with Part 4, Division 2, of the Water Code of the State of California. Therefore, as provided under Section 4201, the cost of administering the service area and the distribution of water therein is payable one-half by the State and one-half by the parties.

Cost of Watermaster Service for 1967-68

The Judgment requires that the Watermaster prepare and mail a copy of the tentative budget to each of the parties at least 60 days before the beginning of each water year. If no objections are received within 15 days after service of the tentative budget, it becomes the final budget.

The tentative budget submitted to the parties on July 31, 1967, is presented in Table 13. There were no objections and it was adopted as the final budget on August 15, 1967.

TABLE 13

APPROVED BUDGET FOR 1967-68

Salaries and wages	\$34,767	
Operating expenses	<u>16,539</u>	
TOTAL BUDGET		\$51,306
One-half payable by State		\$25,653
One-half payable by parties		<u>25,653</u>

The administrative cost chargeable to the parties was apportioned among the parties as directed by the Judgment. The Judgment provides that if the portion of the final budget payable by the parties is equal to, or less than \$5 per party, the cost shall be equally apportioned among the parties. However, if the parties' share of the budget is greater than \$5 per party, each party will be assessed a minimum of \$5 and the total amount so collected will be deducted from the parties' share of the budget. The remaining balance to be collected is then assessed among the parties in proportion to their Allowed Pumping Allocation which is in excess of 65 acre-feet.

Apportionments of parties' share of the budget for the water year 1967-68 are set forth in Table 14. A five percent penalty is assessed if payments become delinquent. In this respect, 61 parties were penalized as their payments were not made within the allowable 30 days after service of the statement of the amount due. Assessments totaling \$103.51 were collected for delayed payments. There were no outstanding payments on the 1967-68 budget by September 30, 1968. However, there still existed three outstanding payments for the 1966-67 budget. These parties still outstanding are: Juan and Solome Aguayo, John Osinga, and Joe and Cornelia Vanderham.

Inasmuch as the Central Basin Interim Agreement was terminated on September 30, 1966, the parties' share of the money remaining on that date was prorated and credited to the parties then existing. The credit due was applied to these parties on their share of the 1966-67 budget. In all cases, their credit due exceeded their share of the tentative budget and as a result, had an additional credit of \$8,896.85 applied toward their share of the 1967-68 budget.

Chapter III presents information on Exchange Pool water carryover. This provision directs the Watermaster to bill and collect from those parties having a carryover of Exchange Pool water the difference in price per acre-foot (\$3.09) for exchange water when the price in the succeeding water year (\$32.89) exceeds the price of the previous year (\$29.80). A total of \$1,949.10 was collected for exchange water carried over from the 1966-67 water year to the 1967-68 water year. See Table 10 (page 46) for detail breakdown. These additional payments are considered miscellaneous income to the Watermaster and are applied towards that share of the Watermaster's budget to be paid by the parties.

In addition to the above-mentioned receipts, \$237.23 was collected for delayed payments in the operation of the Exchange Pool. The penalties were assessed in accordance with Exchange Pool procedures and the additional miscellaneous income thus collected was applied towards the parties' share of the budget.

Income and expenditures for watermaster service during the 1967-68 water year are shown in Table 15 (page 75). Any credit or debit balance is carried forward into the succeeding water year. This year's work load was curtailed in order to stay within the 1967-68 budget. The 1968-69 budget has been increased to offset this shortage of funds and there should be no reduction in work schedules.

Wier, Arend Z.		
(Now known as Arend Zwier		
Wiersema, Harm and Pearl		13
Wiersma, William and Elbra		6
Williams, John J.		
Successor to: Iver F. Becklund	1	
Margaret E. Becklund	<u>1</u>	2
Williams, Ralph P. and Mary	11	
Sold to Los Angeles County Sanitation District No. 2	<u>-11</u>	0
Wilshire Oil Company of California	1,436	
Sold to Gulf Oil Corporation	<u>-1,436</u>	0
Wilson, Melvin L. and Marie	1	
Sold to Dairy Valley Associates	<u>- 1</u>	0
Winslow, D. P. and Dorothy C.		12
Winters, Helene K.	1	
Dedicated to City of Cerritos	<u>- 1</u>	0
Wiseman, Fred E. and Grayce Anna	2	
Sold to Arden-Mayfair Incorporated	<u>- 2</u>	0

ALLOWED PUMPING ALLOCATION -- SEPTEMBER 1968
(continued)

<u>Party</u>		<u>Allowed Pumping Allocation in acre-feet per year</u>
Wolfsberger, Helen and Christine Joseph		2
Woo, Cho Shee	16	
Sold to Vertex Development Company	<u>-16</u>	0
Wybenga, Gerrit and Rena	8	
Sold to J. N. and Nellie Albers	<u>- 8</u>	0
Yamamoto, George and Alice		14
Yokota, Paul and Miyo		4
Young, Maxine		3
Zandvliet, A.		6
Zeilstra, Arnold and Nellie		5
Zivelonghi, George and Antonio		97
Zuidervaart, Dick and Janna		1
Zylstra, John and Leonard	18	
Sold to City of Cerritos	<u>-10</u>	8
Zwier, Arend		
Was known as Arend Z. Wier	11	
Sold to Glenn-Hagen Development Company	<u>-11</u>	0
TOTAL		<u>217,367</u>
